

## Java

```
class Solution {  
    public boolean canConstruct(String s, int k) {  
  
    }  
}
```

---

## JavaScript

```
/**  
 * @param {string} s  
 * @param {number} k  
 * @return {boolean}  
 */  
var canConstruct = function(s, k) {  
  
};
```

---

## TypeScript

```
function canConstruct(s: string, k: number): boolean {  
  
};
```

---

## C++

```
class Solution {
```

```
public:
    bool canConstruct(string s, int k) {

    }
};
```

---

## C#

```
public class Solution {
    public bool CanConstruct(string s, int k) {

    }
}
```

---

## Kotlin

```
class Solution {
    fun canConstruct(s: String, k: Int): Boolean {

    }
}
```

---

## Go

```
func canConstruct(s string, k int) bool {

}
```

---
